Evolutionary Perspectives on Human Social Psychology and Behavior

This volume presents state-of-the-art empirical studies working in a paradigm that has become known as human behavioral ecology. The emergence of this approach is often traced to a 1979 collection of studies edited by Chagnon and Irons entitled Evolutionary Biology and Human Social Behavior: An Anthropological Perspective. During the two decades that have passed since then, the conceptual framework has expanded into ever more diverse areas that are organized here. The book opens with an introductory chapter by Chagnon and Irons reviewing the origins of human behavioral ecology and its background on the development of human behavioral ecology and compare it to two complementary approaches to the study of evolution and human behavior, evolutionary psychology, and dual inheritance theory. The second section includes five studies of mating efforts in a variety of societies from South America and Africa. The third section covers parenting, with five studies on societies from Africa, Asia, and North America. The fourth section breaks somewhat with the traditional organization into six sections. The first section includes two chapters that provide historical background on the development of human behavioral ecology and compare it to two complementary approaches to the study of evolution and human behavior, evolutionary psychology, and dual inheritance theory. The second section includes five studies of mating efforts in a variety of societies from South America and Africa.
